# Flush primed doors

## WHY SHOULD YOU CHOOSE OUR DOOR

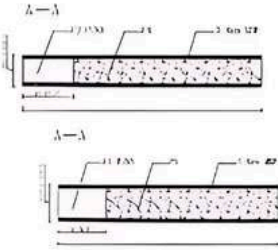

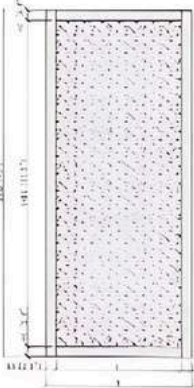

- 1
- Impact resistance  
We use eco-friendly high density particle board on the interior of the door which gives strength, durability and sound reduction. Also we clad the door with a 3/16" HDF layer to help with a beautiful finish when painted and adds to the durability of the door.
- 2
- Our doors are easy to cut to size  
Our doors can be modified in height and width up to 2 inches on either side without the need for a rerail. This is possible thanks to the use of a 2.5" thick wood frame all around the entire door.
- 3
- High quality multi-coat primer  
The first layer of primer is pumped with UV paint, which prevents moisture from seeping inside the door, and two subsequent layers of primer with polishing facilitate the final painting and guarantee an excellent appearance of our product.
- 4
- Beautifully sanded and painted door edges  
On our doors you will not see saw marks, burrs or wood structure.
- 5
- The ideal geometry of the door will facilitate the work of any installer and guarantee no rubbing during opening and closing of the doors.
- 6
- We use a dense corrective layer in the interior of the hollow core doors to prevent cupping and warping which makes our hollow core doors a leader in the industry.

Contemporary

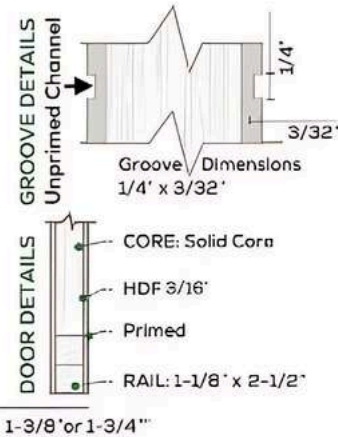

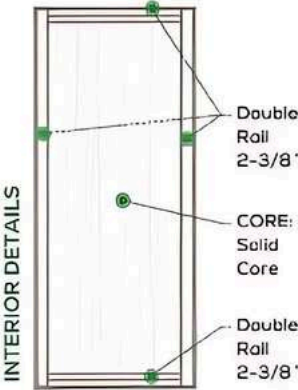

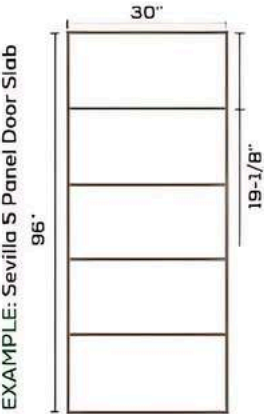

JMD Global's modern-style doors are a premium flush door. Our new modern-style flush doors feature a 3/16" thick HDF veneer. The channels are routed 3/32" deep resulting in sharper shadow lines and a greater definition.

The stile and rail construction is made of finger joint pine with stave core technology. Stave core doors offer excellent stability against warping and provide ideal durability. Stave core technology allows the door to be used in areas with extreme conditions of temperature, humidity and dryness.
